

**Amendments to the Specification:**

Please delete the current abstract, and replace with the following:

-- The invention relates to a file assembly for keeping personal records. The assembly includes a binder, and at least one sleeve and at least one photograph display device received in the binder. Each sleeve has opposed operatively front and rear walls. The front wall is smaller than the rear wall and has a periphery along part of which it is secured to the rear wall, such that the walls define between them a pocket, having a peripheral opening, for receipt of personal records. Each photograph display device is for displaying at least one photograph. The binder is provided with a securing mechanism by means of which each sleeve and each photograph display device are removably secured in place in the binder.--
